DETAILED ACTION

The prosecution has been reopened due to one of the previous references having a date not suitable for the prosecution of this application.

Claims 1-9 have been examined.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Mahar, U.S. patent 5,418,965.

As per claims 1 and 5, Mahar discloses a method/information system for verifying electronic data records including at least one of electronic shipping-voucher data and shipping data sent by a sender to an information system, comprising the steps of:

an interface (col.2, 42-61) for receiving the electronic data record by the information system (The system receives data. col.5, 50-62);

checking the data record by the information system for a presence of errors (The system checks for errors. col.13, 43-68; col.14, 1-36);

an interface (col.2, 42-61) routing the data record to a receiver if the data record is error-free (col. 15. 54-65; fig's. 4 & 5; The system routes and stores data from one database onto another.); and

storing the data record in a defined access area of the information system if the data record is faulty (There is a table for storing errors and there is also storage for more than one kind of error. col.13, 43-68; col.14, 1-36; fig.6), the data record stored in the defined access area being examinable by the sender and revisable (col.2, 1-25; The data can be examined).

As per claims 2, Mahar discloses adjusting information of the data record in accordance with ordering information stored in a database (col.15, 44-53).

As per claims 3, Mahar discloses wherein the checking step is performed for a plurality of at least one of plants and areas of plant operations of a system provider jointly at a single central location (There is a central processing CPU that undertakes various activities, including storing data on various databases. col.1, 38-65).

As per claims 4, Mahar discloses analyzing a number and a type of errors of faulty data records contained in the defined access area with respect to development over time; and displaying information in the defined access area in accordance with the analyzing step (col.13, 43-68; col.14, 1-36).

As per claims 6, Mahar discloses an interface to a database containing order information (col.2, 42-61).

As per claims 7, Mahar discloses wherein the data records contained in the defined access area are inspectable and revisable (col.2, 1-25; fig.6) by the sender (user) via the Internet (network) (col.7, 1-52).

As per claims 8, Mahar discloses wherein the faulty data records stored in the defined access area are inspectable by the receiver (user) (col.2, 1-25; fig.6).

As per claims 8, Mahar discloses wherein the data records contained in the defined access area are inspectable and revisable (col.2, 1-25; fig.6) by the sender (user) via a data network (col.7, 1-52).
